The MIT SCM Program is designed for early career supply chain and industrial engineering professionals who wish to go back to school to receive advanced training in supply chain management and analysis. It is an intense 10-month study program that includes coursework, a company-sponsored thesis project, and international travel to one of MIT’s SCALE Centers in Europe, South America, or Asia. The SCM program enables young professionals to obtain higher-level, more interesting jobs. Recent graduates have received a significant, average salary boost of over 70%.
